The present sequence encodes a human scavenger receptor, designated STGL-P1. The STGL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic compilcations, bacterial infection and restenois following angioplasty, which are associated with accumulation of exidized low density
                                                                                                                                                                                                                                                                                                                                                          useful for treatment and diagnosis of diseases associated with oxidized low-density lipoprotein accumulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1018

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral socierosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervopathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scierosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibhn activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,

The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary deoxyribonucleic acid (CDNA) inserts (II), where the protein is substantially free from other mammalian proteins. (I) are useful for preventing, treating or amalogenesis, or preventing a medical condition, especially immunological treatment or prevention of tumours. (I) exhibits activity relating to amalogenesis, cytokine, cell proliferation, call differentiation, antinfiammatory, stem cell growth factor activity and activin or inhibin-related activity relating to amalogenesis, cytokine, cell proliferation, coll differentiation of merval cells and activity and activin or inhibin-related colls and cativities. (I) can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or rise to neuroepithelial cells that can be used to augment or replace cells and brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzahmer's, Parkinson's disease, amyctrophic certivity, regulation of haematopoiesis and is useful for treating myeloid or lateral sclerosis. (I) is involved in chemotactic or chemokinetic cor lymphoid cell disorders, platelet disorders such as thrombocytopaenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders or periodontal disease. (I) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune disorders and disorders erg. multiple sclerosis, rhemmatoid arthritis, autoimmune disorders erg. multiple sclerosis, rhemmatoid arthritis, such as asthma or other respiratory problems. (II) is such the corresponding protein is preferentially processed and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autolmmune diseases, bone disorders and lung or liver fibrosis

                                                                                                                                                                                                                                                                       This sequence encodes a human secreted protein of the invention.

This DNA sequence was isolated from a human adult brain cDNA

This DNA sequence was isolated from a human adult brain cDNA

This DNA sequence was isolated from a human adult brain cDNA

This DNA and proteins

Sultable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional sources or supplements, immune ctivities include nutritional sources or supplements, immune ctivity, tissue growth activity, activiny, haemacopoiesis regulating activity, is used growth activity, anti-inflammatory activity, cadherin/tumour nvasion suppressor activity, and tumour inhibition activity. The DNAs are also stated to be useful for gene therapy. A host cell transfected with the DNA, or its subfragments and variants is useful for recombinant production of the human secreted protein clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        710

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a human scavenger receptor, designated SRCL-P1. The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful for treatment and diagnosis of diseases associated with oxidized low-density lipoprotein accumulation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, antianglogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in directions and the properties of th

The present sequence encodes a human scavenger receptor, designated SRCL-Pl. The SRCL-Pl polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal mimunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1078

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags of orientifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantificating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in capposition for generic disorders or other trails to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences of the invention.

Camino acid sequences AAS64197-AAS94564 represent novel human by and diagnostic coding sequences of the invention.

Cappositication, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               171

```
This sequence encodes the human cellular stress response 3 (CSR3) protein of the invention. The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and diagnosis of diseases in which intracellular stress is important, such as arteriosclerosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to intracellular stress, and inhibits cell death as a result of such stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1104

```
This sequence encodes the human cellular stress response 1 (CSR1) protein of the invention. The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and diagnosis of diseases in which intracellular stress is important, such as arterioscierosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to intracellular stress, and inhibits cell death as a result of such stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1112

Patent No. 6007980

GENERAL INFORMATION

APPLICANT: Reeders, Stephen T

APPLICANT: Hudson, Maren E

APPLICANT: Hudson, Billy G

TITLE OF INVENTION: Alpha-3 Chain Type IV Collagen Polypeptides

FILE REFERENCE: 951263B

CURRENT FILING DATE: 1998-10-07

EARLIER TILNG DATE: 1998-10-07

EARLIER TILNG DATE: 1998-10-07

NUMBER OF SEQ ID NOS: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            816 TTCTCTTCTTTGTACAAGGAAATGAACAAGCCCATGGACAGGA----
